

# ABSTRACT

This invention provides a sheet of affixing labels comprising a label sheet which has a layer of adhesives coated on the back surface of a sheet of paper and a releasing sheet, which has a layer of clay coated on the front surface of a sheet of paper, said layer of clay being further coated with a layer of releasing agents of silicon. The releasing sheet preferably has the back surface coated with a layer of clay. The sheet of affixing labels is prevented from being curled, waved and broken, when used by means of a copying machine, laser printer, etc.. Also, the sheet of affixing labels is prevented from the label sheet being fallen from the releasing sheet, when used by means of a copying machine, laser printer in which toners are to be fixed at high temperature, and in which the sheet is to be reciprocated and turned round.
